FEATURES

| | |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cast iron grids | Cast-iron is the ideal material for an hob grid, this due to the manifold properties characterising it: high heat capacity that improves cooking performance; high weight and stability that improve safety; sturdiness that preserves the hob's original aspect over time; easy cleaning. |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| | |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------|
| Safe cooking | All Foster cooker hobs are equipped with safety valves. They shut off the gas supply very quickly if the flame accidentally goes out. |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------|

| | |
|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| Under-knob ignition | The utmost freedom of movement with electronic under-knob ignition, a common feature of all models that allows a one-hand ignition of the burner. |
