FEATURES

Diamond-shape bottom The draining of water is an important feature in a sink, and it's always taken good care of in Foster products. In the bent-welded sinks, which would have a flat bottom, the proper draining is guaranteed by the elegant beveling, which helps the water flow.

High thickness 1mm thick steel. A significant thickness, which guarantees the maximum sturdiness and durability.

Perimetral overflow The overflow is always a security on the Foster sinks that prevents the overflow of water in case of oversights. The perimeter drain solution improves aesthetics thanks to its square and essential shape.

Small radius Bowls with squared shapes with a modern design and an increased capacity, for a minimal aesthetics connected with an extreme practicality.
